### What are the risks of investing?

#### *Risk indicator for the IVCM Vanguard LifeStrategy 60% Equity Fund*

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at [sorted.org.nz/tools/investor-kickstarter](https://sorted.org.nz/tools/investor-kickstarter)

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. As the Fund has not been in existence for five years, the risk indicator is based on market index data for the period 1 July 2016 to 31 January 2018 and actual returns for the period 1 February 2018 to 30 June 2021. As a result of this, the risk indicator may provide a less reliable indicator of the potential future volatility of the Fund. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates.

See the Product Disclosure Statement (**PDS**) for more information about the risks associated with investing in this Fund.

## How has the Fund performed?<sup>1</sup>

|  | Past year |
|--|-----------|
| <b>Annual return<sup>2</sup></b><br>(after deductions for charges and tax) | 11.86%    |
| <b>Annual return</b><br>(after deductions for charges but before tax)      | 14.18%    |
| Market index annual return (reflects no deduction for charges and tax)     | 14.45%    |

The market index annual return is a composite index, calculated using 60% MSCI World Index net div (GBP) and 40% Bloomberg Barclays Global Aggregate Index (GBP hedged). To the extent that imputation credits are available, they are included in the market index.

The market index changed on 21 December 2018 from a composite index, calculated using 60% MSCI World Index and 40% Bloomberg Barclays Global Aggregate Index (both in GBP) to a composite index, calculated using 60% MSCI World Index net div (GBP) and 40% Bloomberg Barclays Global Aggregate Index (GBP hedged) as it is a more appropriate index in terms of assessing movements in the market in relation to the returns from the assets in which the Fund invests.

See the Statement of Investment Policy and Objectives (**SIPO**) for details of the Fund's benchmark asset allocation and the asset class indices.

Additional information about the market index is available in the 'Market Index' document on the offer register at [disclose-register.companiesoffice.govt.nz](https://disclose-register.companiesoffice.govt.nz) (search for 'IVCM (NZ) PIE Superannuation Fund').

This shows the return after fund charges and tax for each year ending 31 March since the Fund started. The last bar shows the average annual return since the Fund started, up to 30 June 2021.

**Important:** This does not tell you how the Fund will perform in the future.

Returns in this update are after tax at the highest prescribed investor rate (**PIR**) of tax for an individual New Zealand resident. Your tax may be lower.

### Currency hedging

Ranfurlly has made reasonable endeavours to obtain all relevant information regarding currency hedging, but due to a lack of information (i.e. the underlying investment manager does not publish foreign hedging levels) Ranfurlly is not able to report the foreign hedging level of the six investment funds the Underlying Fund invests in.

Additional information about currency hedging is available in the 'SIPO' on the Scheme Register at [disclose-register.companiesoffice.govt.nz](https://disclose-register.companiesoffice.govt.nz) (search for 'IVCM (NZ) PIE Superannuation Fund').
